- Canned Foods
- Dietary Fiber Supplements
- Care Foods
- Processed Meats
- Nutrition Bars and Snacks
- Dressings and Sauces
- Gluten-Free Products
- Pet Foods
- Health and Functional Foods

WHAT IS PARTIALLY HYDROLYZED GUAR GUM?

Partially Hydrolyzed Guar Gum is often referred to as PHGG, is a special form of guar gum, a natural substance derived from guar beans. What sets PHGG apart is that it has undergone a controlled process called hydrolysis. This process breaks down the guar gum into smaller parts, changing its properties in a way that makes it more soluble in water.

Generally, the hydrolyzed guar gum is considered effective and safe in the gut health promotion. Such material can be essential to treat constipation, irritable bowel syndrome, and IBS-diarrhea in both children and adults. Moreover, the hydrolyzed guar gum is considered the prebiotic fiber.

It can be prepared from the guar gum through microbial beta-endo mannanase while considering the production method by completely reducing the guar gum high viscosity.

fssai

ADDITIONAL INFORMATION

Main Functions

- Short-chain fatty acid production
- Butyric acid production
- Improved intestinal flora
- Increased useful bacteria
- Suppression of intestinal inflammation
- Liver (NASH inhibition)
- Relief of constipation
- Inhibit diarrhea
- IBS
- Diet
- Blood sugar control
- Improved lipid metabolism

Packaging

- Packaging materials are carefully chosen to ensure compliance with food safety standards and product integrity.
- All materials are resistant to moisture and external contaminants.
- Different sizes cater to diverse customer needs.
- Pouches, Bulk Bags, bottles and customized packaging are available.

Storage

- Store in a cool and dry place.
- Keep it away from direct sunlight.
- Keep the packet tightly closed after use.
- Store it away from strong smelling substances or materials to prevent any unwanted flavor or scent transfer.
